NASA (National Aeronautics and Space Administration)

https://jain-rishabh.medium.com/how-nasa-uses-javascript-30f7f0252d38

NASA uses Javascript and all of its frameworks. Matter of fact, the new James Webb Telescope is controlled and operated by Javascript. Also, NASA uses Node.js. After an Astronaut almost lost his live due to information being scattered all over the US, NASA decided to build its own database using Node.js. As a result, NASA now has 1 database for everything and their Data Access Time is also reduced by 300 percent!

Kelper Communications

Kepler Communications also uses Javascript plus two of its frameworks, React and jQuery. These are mostly used for in-house applications.

Uber

https://www.uber.com/blog/tech-stack-part-one-foundation/

This famous company uses Node.js. It was originally used by its Marketplace team and is actually still in high usage. Vanilla Javascript & React are used to build data products.
